Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4,6-11, 13-17 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Hettche (US Pat.No.5,164,194).

Hettche teaches the use of medicament composition for the nasal administration of a drug to a patient comprising azelastine in a dry powder form having a maximum particle size of 20 microns, suitable for local nasal application, which additionally overcomes the issues of bitter aftertastes and somnolence (see reference column 1, lines 34-68); (column 2, lines 1-34); (column 5, lines 18-53); (column 6, lines 1-35); (column 8, lines 1-46).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5,12 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hettche in view of Feldstein et al. (US Pat.No.5,352,461).

Hettche teaches the use of all the claimed limitations but is deficient only in the sense that he does not explicitly teach the use of the particular diketopiperazine polymer in his formulation. However, Feldstein et al. suggests the use of a drug delivery system in which diketopiperazine is used to form microparticles encapsulating a drug to be delivered (see reference column 2, lines 40-52); (column 3, lines 12-23); (column 5, lines 36-46). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to use any synthetic polymer formulation with the combination of a drug to obtain the desired nasally administered composition as instantly claimed invention. The expected result would be a (dry powdered) formulation for the local and symptomatic treatment of rhinal disease.
